BEAUTIFUL

This is not your father's bench grinder with lumpy stone wheels, dust and the required bucket of water. In the world of bench grinders with conventional wheels about 50% of the effort, energy and torque in the grinding process is wasted in wheel wear and consumption causing heat and high loss in efficiency.

Using a Toycen Tradesman Precision DC Grinder equipped with Cuttermasters' Precision Superabrasive Wheels virtually all of the energy and mechanical effort is available for grinding "milling" action.

This setup provides substantially higher torque and presents a new physical environment where material can be removed about twice as fast and at substantially lower rpm.

The Toycen Tradesman Precision DC Grinder with LSHF (Low Speed High Feed) processing makes possible the grinding of carbide, carbon fiber, fiberglass, and plastics without the wheels loading up or glazing .

It's a new day

Jeff Toycen,
Cuttermasters

**SPEED / TORQUE COMPENSATION CONTROL
5X MORE POWERFUL THAN YOUR AVERAGE 8" GRINDER
5 FT·LBS AT 1000 RPM**
